

REPLACEMENT ABSTRACT

When tone conversion processing and color correction processing is carried out on image data obtained by a digital camera, processed image data enabling reproduction of a high quality image can be obtained. A 3DLUT for carrying out the tone conversion processing and the color correction processing on the image data obtained by the digital camera is generated. The image data are converted according to the 3DLUT, and subjected to sharpness processing to generate the processed image data. The processed image data are printed as a print by a printer.
